

IQ Modem Loading Instructions

***Note** – This document assumes the modem is being loaded from factory default. If you are updating an already loaded modem, the IP addressing, and login credentials may be different. Please contact our NOC to obtain this information if required.

Connect the computer to the Management port on the back of the modem and open a web browser (Firefox, Chrome, Internet Explorer, etc.). This will be the **ETH2 port** on the on the IQ desktop, Desktop+ and IQ 200 modems and **SAT ETH port** on the IQLTE.

Type the modem's IP address into the address bar at the top of the browser. Default is 192.168.0.1. (PC may need to be hardcoded to match the IP address subnet of modem)

Log into the modem using the following credentials:

User: admin
Password: iDirect (Factory default)

Loading software and options files

Download version iDX 4.3.0.0 from our website at:

https://isotropic.network/wp-content/uploads/2024/10/evo_iQseries_rmt_rootfs-23.0.1.1-299.98.zip

If a new option file or software package needs to be loaded, navigate to the “Administration” tab.

The screenshot displays the iDIRECT terminal management interface. At the top, there is a navigation bar with the iDIRECT logo on the left and five status indicators (Receiver 1, Transmitter, Network, Power, Status) on the right. Below the navigation bar, a blue menu bar contains the following tabs: Dashboard, Details, Commissioning, and Administration (which is highlighted with a green box and a mouse cursor). The main content area is titled "System Status" and features a "Go Offline" button. A yellow warning banner states: "The terminal is currently not in network. Please start the commissioning wizard if the terminal hasn't been commissioned yet." with a "Start wizard" button. The interface is divided into several sections: "Link Status" (Network Status: WAITING_FOR_RX_LOCK, Satellite Receiver: Waiting for Demod Lock, Satellite Transmitter: MUTED, Receive SNR: -10 dB), "Receiver SNR (primary)" (a line graph showing a constant value of -10 dB from 11:06:28 to 11:06:34), "Take me to..." (a list of links: View Satellite Details, View Terminal Details, View current LAN throughput), "Terminal Information", "Device Status", and "Terminal Events" (a table with columns for Up Time and Description).

To load the software package, click **Select files** next to upload software package. Locate the package on your computer and then click load. An example of a software package name is **evo_iQseries_rmt_rootfs-23.0.1.1-299.98.pkg** (this is the current iQ Software)
